

REVIEW
of the educational and scientific programme
"Architecture of buildings and structures"
of the preparation of applicants for higher education
at the second (Master's) level in the speciality
191 "Architecture and urban planning"

In accordance with the cooperation agreement, Lublin University of Technology conducts joint educational activities with the Kyiv National University of Construction and Architecture. Since 2016, KNUCA students studying at the second (Master's) level in the speciality 191 "Architecture and Urban Planning" have had the opportunity to receive a double education on the basis of the Faculty of Architecture in Kyiv and the Faculty of Architecture of the Lublin Polytechnic in Poland. In order to implement dual education, the educational and scientific programmes of the Department of Conservation of Built Heritage Faculty of Civil Engineering and Architecture (Politechnika Lubelska) of the Lublin University of Technology and the educational and scientific programmes of the Faculty of Architecture of the Kyiv National University of Civil Engineering and Architecture ("Architecture of Buildings and Structures") were integrated.

The result of the study is the completion and defence of a diploma thesis by students on the basis of both universities, and the receipt of a double diploma of higher education at the second (Master's) level. It should be noted that the educational and scientific programme of KNUCA "Architecture of Buildings and Structures" was developed taking into account European standards of education and international requirements for master's architects. This made it possible to integrate educational programmes without complications and successfully implement the training of students under the double diploma program. KNUCA students who studied in this programme have proven themselves as high-level specialists. Some graduates work in international architectural companies, including in Poland.

The educational and scientific programme "Architecture of Buildings and Structures" for training students of higher education at the second (Master's) educational and scientific level in the speciality 191 "Architecture and Urban Planning" is recommended for further implementation at the Kyiv National University of Civil Engineering and Architecture.
